

ARENA2036

3D Interaction in Vehicles

Team

Developers

Julia Breuer | MI7 | 4th Semester
Hana Le | MI7 | 4th Semester
Eren Dorlak | MI7 | 4th Semester
Firas Dawood | MI7 | 4th Semester

UI/UX Designers

Yeowon Lee | Minor: Visual Communication
Kira Helen Frankenfeld | Computer Science and Media | 2nd Semester
Olivia Restivo | Computer Science and Media | 3rd Semester

Technologies

- Miro Board
- 3D-Printer
- Unity
- Figma

Process

1. State-of-the-art Research
2. Defining and Conceptualizing
3. Implementing and Designing

upcoming:

- Testing and Evaluation

The project is embedded in the research and development of future-oriented vehicle technologies and is being conducted in the innovative environment of the ARENA2036 research campus in collaboration with Mercedes-Benz AG. The aim is to set new standards for interaction technology in vehicles. As part of the project, we have developed a low-fidelity prototype of an advanced rotary push button, based on a space mouse, that controls 3D elements and can also be used to navigate in a VR environment.
