

# Rats Nest – ReadMe

---

A game about being a lab-rat.

Destroy the factory/laboratory, annoy humans and escape captivity.

## How to start the game

### Windows(11)

Download the .zip file and extract it. You should now have rats-nest.exe and godot-jolt\_windows-x64.dll. They need to stay in the same directory.

Now execute the .exe-file (by double-clicking it). Windows Defender will probably alert you that the .exe file is unsigned.

This can be easily circumvented:

- In the alert there should be a line saying "More Info" -> Click that
- Now there should be a button "Run anyway"

The game should start now

### What if it doesn't start?

On some systems this might still not work.

In this case right click in your file explorer and press "Open in Terminal"

Now type `./rats-nest.exe` and hit enter.

The game should start now

## Basic instructions

### General

Camera sensitivity can be adjusted in game:

- Hit "ESC" or the Start-Button on your Controller
- Adjust the sliders

## Keyboard/Mouse

- Physical movement via the WASD-Keys
- Camera movement via the mouse
- Jump using Space

Everything else will be explained in game

## Controller

- Physical movement via the left stick
- Camera movement via the right stick
- Jump using the lower button (A on XBox, X on Playstation, B on Nintendo)

Everything else will be explained in game
